Subject: Cross-Platform Mobile Application Development (01CT1517)		Aim: To install and configure Flutter Environment. Create an app to display "Hello Username" and on press button to display a greeting message.	
Experiment No:- 01	Date:- 19-09-2024	Enrollment No:- 92200133030	

Objective:- To install and configure Flutter Environment. Create an app to display "Hello Username" and on press button to display a greeting message.

Code :-

```
import 'package:flutter/material.dart';

void main() {
  runApp(const MyApp());
}

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Flutter Demo',
      debugShowCheckedModeBanner: false, // Remove the debug ribbon from the app
      theme: ThemeData(
        colorScheme: ColorScheme.fromSeed(seedColor: Colors.deepPurple),
        useMaterial3: true,
      ),
      home: GreetingScreen(), // The home screen of the app is GreetingScreen
    );
  }
}

// GreetingScreen - A stateful widget as it will manage dynamic state
class GreetingScreen extends StatefulWidget {
  @override
  _GreetingScreenState createState() => _GreetingScreenState();
}

// State class for GreetingScreen
class _GreetingScreenState extends State<GreetingScreen> {
  String username = ''; // Variable to store the username entered by the user
  String greetingMessage =
    ''; // Variable to store the greeting message generated

  TextEditingController controller =
    TextEditingController(); // Controller for managing the TextField input

  // Function to generate a greeting message based on the input username
  void generateGreeting() {
    setState(() {
      greetingMessage =
        'Hello $username, Greetings of the day!'; // Update greeting message
    });
  }
}
```

 Marwadi University Marwadi Chandarana Group	NAAC A+	Marwadi University Faculty of Technology Department of Information and Communication Technology	
Subject: Cross-Platform Mobile Application Development (01CT1517)		Aim: To install and configure Flutter Environment. Create an app to display "Hello Username" and on press button to display a greeting message.

Code :-

➤ lib

- constants

- colors.dart

```
import 'package:flutter/material.dart';

// Define a constant color for red, typically used for errors or alerts
const Color tdRed = Color(0xFFDA4040);

// Define a constant color for blue, can be used for primary buttons or highlights
const Color tdBlue = Color(0xFF5F52EE);

// Define a constant color for black, useful for text or dark backgrounds
const Color tdBlack = Color(0xFF3A3A3A);

// Define a constant color for grey, often used for disabled elements or secondary text
const Color tdGrey = Color(0xFF717171);

// Define a constant background color, providing a light theme to the app
const Color tdBGColor = Color(0xFFEEEEFF5);
```

- controller

- todo_item.dart

```
import 'package:flutter/material.dart';

import '../model/todo.dart'; // Importing the ToDo model.
import '../constants/colors.dart'; // Importing custom color constants.

class ToDoItem extends StatelessWidget {
  final ToDo todo; // The ToDo item to be displayed.
  // Callback function when the ToDo item is changed (completed or not).
  // ignore: prefer_typing_uninitialized_variables
  final onToDoChanged;
  // Callback function when the delete icon is pressed.
  // ignore: prefer_typing_uninitialized_variables
  final onDeleteItem;

  const ToDoItem({
    super.key,
```

Objective:- Blog Application using Firebase

Code :-

➤ **Lib**

- **models**

- **blog.dart**

```
class Blog {
  String? title;
  String? description;
  String? id;
  Blog({this.title, this.description, this.id});
}
```

- **services**

- **firebase_services.dart**

```
import 'package:cloud_firestore/cloud_firestore.dart';
import '../models/blog.dart';

class FirebaseServices {
  var db = FirebaseFirestore.instance;
  addBlog(String title, String description) {
    // Create a new note with a title and description
    final note = <String, dynamic>{"title": title, "description": description};

    // Add a new document with a generated ID
    db.collection("blog").add(note).then((DocumentReference doc) =>
      // ignore: avoid_print
      print('DocumentSnapshot added with ID: ${doc.id}'));
  }

  Stream<QuerySnapshot> fetchBlog() {
    Stream<QuerySnapshot> collectionStream =
      FirebaseFirestore.instance.collection('blog').snapshots();
    return collectionStream;
  }

  // Stream documentStream =
  FirebaseFirestore.instance.collection('users').doc('ABC123').snapshots();

  updateBlog(Blog blog) {
    return db
      .collection("notes")
```
